

# 360° Spherical Video Maps

VISUAL INTELLIGENCE – VIEWER CONTROLLED  
IMMERSIVE VIDEO – THE FUTURE OF INDOOR MAPPING.

- Increased Safety
- Better Training
- ALARA
- Easier Planning
- Security
- Emergency Prep
- Pre-job Briefs
- Save Dosage
- Video Tours

VMAP Nuclear can capture imagery of your plant's buildings and facilities that helps engineers, work planners, and maintenance workers see into the intricate facility without risking unnecessary worker exposure.

“Google Street View –like video maps of the indoors of your buildings. Your contractors and support personnel will never get lost again! ”

The VMAP system employs a geodesic array of 11 video sensors that capture video in all directions. The camera design allows VMAP's advanced stitching software to seamlessly tie together all 11 feeds into a single spherical video. The viewer is then able to click and drag on the video screen to look around in any direction, at any time while the video is playing. As a visual intelligence tool, the system is unrivalled.
