

# Spherical Video Maps

## SERVICES AVAILABLE

- **RECORDED VIDEO ROUTES**  
Our technicians will record paths through all the buildings at your site.
- **DATABASE POPULATION**  
We will add displayable info labels and items on the floormap and video record.
- **LIVE STREAMING VIDEO**  
Self-contained live video streaming cameras are available for your site.
- **ONSITE VIDEO PROCESSING**  
All data and video is kept secure onsite and installed for view in secure areas.

## 360 VIDEO MAPPING SOLUTIONS THAT WORK FOR YOUR BUSINESS

VMAP Nuclear will capture 360° imagery of your plant's buildings and facilities that helps engineers, work planners, and maintenance workers see into your intricate facility interior without risking unnecessary worker exposure. The VMAP system employs a geodesic array of 11 video sensors that captures video in all directions.

The camera design allows VMAP's advanced stitching software to seamlessly tie together all 11 feeds into a single spherical video. The viewer is then able to click and drag on the video screen to look around in any direction, at any time while the video is playing. As a visual intelligence tool, the system is unrivalled.
